

LUG supports „Shelter of Hope“ in Mombasa

Frankfurt/Main, July 2014 — LUG aircargo handling has organised the transport of a diagnostic appliance from Germany to Mombasa (Kenya). The 12-year-old X-ray apparatus was donated by Dr. med. Volker Aldinger who wanted to support an aid initiative of Stephan Hafen in Rhodt near Rietburg (Germany). The diagnostic equipment will be used in the St. Joseph hospital of the Christian aid organisation „Shelter of Hope“ (<http://www.shelterofhopekenya.org/>) in Kenya.

“When we were asked to help Stephan Hafen with the preparations for and execution of the transportation of the appliance we spontaneously agreed to cover all costs“, explained Nina Hampel, Manager Sales and Customer Service, LUG aircargo handling GmbH. „However, we got generous support from other companies too. We would like to thank Deufol, Frankfurt, for the expert export packing of the equipment after its delivery to our premises. The company made staff and packaging material available free of charge. LUG then arranged the necessary export and import documentation, the security scanning, the interim storage, and the transportation to FCS Fraport Cargo Services for loading the appliance on to the aircraft as well as the customs clearance in Kenya. The Total Air Cargo Management Experts Leisure Cargo GmbH supported the project with a special rate for the Condor flight from Frankfurt to Mombasa on June 12 for which we are very grateful.“

“LUG aircargo handling is always delighted to support such social commitment of citizens with its experience and competence. Thanks to careful planning the transport was executed without a hitch and the X-ray machine arrived safely and without delays at its destination. It will be able to do many years of service there. The sincere gratitude of the hospital staff and the patients is our greatest reward“, said Patrik Tschirch, Managing Director and COO, LUG aircargo handling GmbH.
